

Thyro-PX® Anybus® Modbus RTU

Guide

57010167-00A

June 2017

Related Documentation

For complete information on the Thyro-PX unit, see the user manual that accompanied the system. In particular, reference the safety information in Chapter 1 of the user manual for the Thyro-PX unit.

ANYBUS MODBUS RTU MODULE

The Anybus Modbus RTU module is an optional accessory for the Thyro-PX power controller.

HARDWARE DESCRIPTION

This module is compliant with the Modbus® RTU standard.

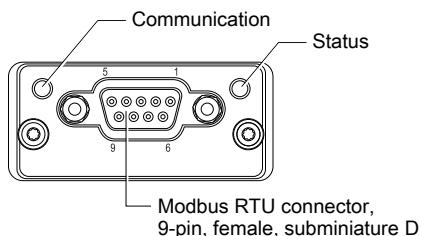

Figure 1. Hardware

Table 1. Communication LED

State	Indication
Off	No power or no traffic
Yellow	Frame reception or transmission
Red	A fatal error has occurred

Table 2. Status LED

State	Indication
Off	No power or initializing
Green	Module initialized, no error
Red	Internal error or major unrecoverable fault
Red, single flash	Communication fault or configuration error Case 1: Invalid settings in Network Configuration Object. Case 2: Settings in Network Configuration Object has been changed during runtime, the settings does not match the currently used configuration.
Red, double flash	Application diagnostics available

Table 3. Connector pinout

Pin	Direction	Signal	Description
Housing		Cable shield	Protective Earth
1		Gnd	Bus polarization, ground (isolated)
2	Output ^[II]	5 V	Bus polarization power +5 VDC (isolated)

Table 3. Connector pinout (Continued)

Pin	Direction	Signal	Description
3	Input	PMC	Connect to pin #2 for RS-232 operation. Leave unconnected for RS-485 operation.
4			Not used
5	Bidirectional	B-line	RS-485 B-line
6			Not used
7	Input	Rx	RS-232 data receive
8	Output	Tx	RS-232 data transmit
9	Bidirectional	A-line	RS-485 A-Line
¹ Any current drawn from this pin will affect the total power consumption.			

CONFIGURING WITH THYRO-TOOL PRO PC SOFTWARE

You can configure the Thyro-PX power controller using either the Thyro-Tool Pro PC software or the Thyro-Touch display.

To configure the unit, you will:

- Adapt the Thyro-PX hardware configuration

If required, you can also:

- Select the configuration
- Configure the diagnostics
- Configure the flexible link parameters

Adapting Thyro-PX Hardware Configuration

Open parameter file with the unit online in the **Port Explorer** tab of the Thyro-Tool Pro PC software, or use the Thyro-Touch display.

Set the Anybus module slot to **Modbus RTU** in the Thyro-PX device hardware configuration:

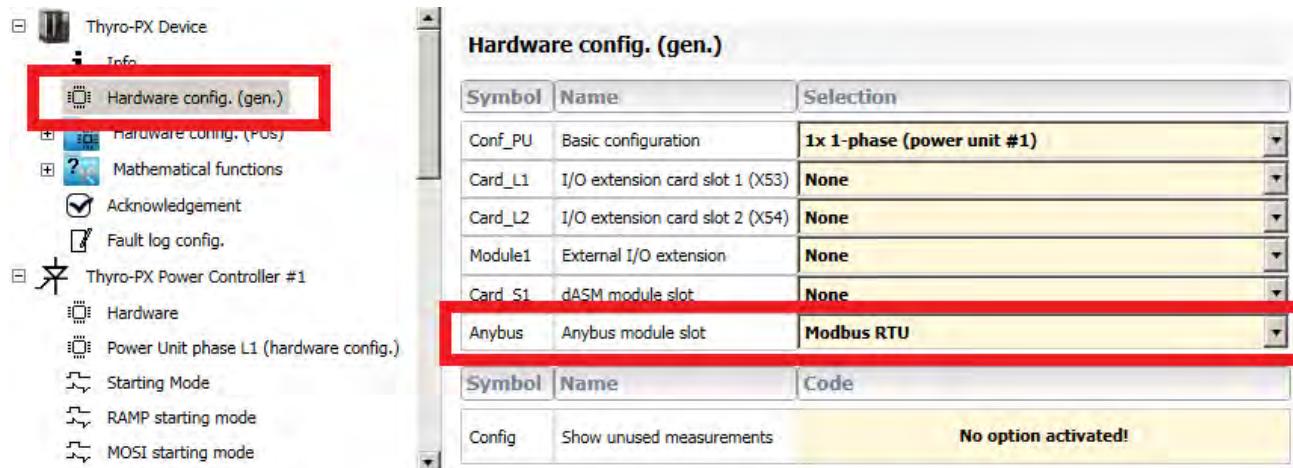

Figure 2. Menu tree

Anybus Parameter Group

When the computer is connected to the Thyro-PX power controller, the Anybus parameter group will be added to the parameter list after updating the hardware configuration, as shown in the previous figure.

If the unit is not available for online configuration, the software can also be configured offline. Contact AE Global Services to obtain a parameter file appropriate to your hardware configuration.

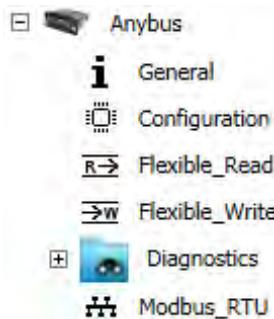

Figure 3. Anybus parameter group

Configuring Modbus RTU Communication Parameters

Set the Modbus RTU communication parameters in the submenu **Modbus_RTU**:

Modbus_RTU

Symbol	Name	Value	Minimum	Maximum
Address	Address	100	1	247

Symbol	Name	Selection
BaudRate	BaudRate	19200bps
Mode	Mode	Even parity, 1 stop bit

Symbol	Name	Value	Minimum	Maximum
Timeout	Timeout	2.00 s	0.00 s	60.00 s

Figure 4. Configure Modbus RTU communication parameters

Selecting Configuration

Configuration

Symbol	Name	Status
Valid	Control of validity	● Cyclic telegram valid only if bit is set
SetMopo	Motorpotentiometer = Master	● Motorpotentiometer = Master

Symbol	Name	Selection
SP_Error	Setpoint Error	Zero
LRConfig	Local remote configuration	Unchanged behaviour

Figure 5. Select configuration

Each configuration name, status, and selection is described in the following table:

Table 4. Configuration

Name	Status/Selection	Description
Control of validity	Cyclic telegram valid only if bit is set	When enabled, the cyclic telegrams received from the master will only be considered as valid and processed if bit 15 of the Device Command (ADI # 41) is set. This function allows several settings to be changed one after another before enabling the complete change, thereby avoiding unwanted effects due to an incomplete change.
Motorpotentiometer = Master	Motorpotentiometer = Master	When enabled, the value of the motorpotentiometer continuously follows the master setpoint while in

Table 4. Configuration (Continued)

Name	Status/Selection	Description
		remote operation, so that no setpoint leap occurs during the switch-over to the local setpoint.
Setpoint Error	Zero	Zero is used as the setpoint when the master setpoint is missing.
	Last valid master setpoint	The last valid master setpoint is used as the setpoint when the master setpoint is missing.
	Last valid error setpoint	The last valid error setpoint is used as the setpoint when the master setpoint is missing.
Local remote configuration	Unchanged behavior	Configuration of the master's influence to the local remote behavior.
	Automatic switch to local	The unit will automatically switch to local mode when the communication with master is interrupted.
	Ignore master in local	When the unit is in local mode, data and commands from the master will be ignored.

Configuring Diagnostics

Modbus RTU diagnostic information is available according to the following tables.

Table 5. Diagnostic registers

Input Register	Dec	Hex	
Diagnostic event count	256	100	Number of pending diagnostic events. There may be gaps between active diagnostic events. Inactive diagnostic events return 0000h when read.
Diagnostic event #1	257	101	High byte = severity
Diagnostic event #2	258	102	Low byte = event code
Diagnostic event #3	259	103	
Diagnostic event #4	260	104	
Diagnostic event #5	261	105	
Diagnostic event #6	262	106	

The following two diagnostic events are supported:

Table 6. Diagnostic events

Event Code	Event
0x10 (= 16)	Error

Table 6. Diagnostic events (Continued)

Event Code	Event
0x40 (= 64)	Temperature

You can configure both events in the Thyro-Tool Pro PC software. You can add any Thyro-PX error or status message. Once an error or status message is added, the message will trigger the corresponding extended diagnosis event.

Configuring Flexible Link Parameters

The flexible link parameters have been designed to allow access to Thyro-PX internal data, such as parameters and actual values, that are not listed in the parameter list.

There are 20 flexible link parameters for writing and 20 flexible link parameters for reading data.

The default read links are shown in the Thyro-Tool Pro PC software, and in the table “[Default Flexible Links](#)”.

Once the respective data point has been selected in the flexible link parameter configuration, it can be accessed on the Modbus RTU using the respective flexible link parameter ADI that is listed in the parameter list (see “[Modbus RTU Parameter List](#)” on page 13).

Default Flexible Links

Table 7. Default flexible links

Flexible Link	Type	Default Link Setting
Flexible read-link 01 r	FLOAT	Power Controller #1: Total power - read
Flexible read-link 02 r	FLOAT	Power Controller #1: L1 Urms - read
Flexible read-link 03 r	FLOAT	Power Controller #1: L1 Irms - read
Flexible read-link 04 r	FLOAT	Power Controller #1: L1 Power - read
Flexible read-link 05 r	FLOAT	Power Controller #1: L1 Resistance - read
Flexible read-link 06 r	FLOAT	Power Controller #1: L1 Umains - read
Flexible read-link 07 r	FLOAT	Power Controller #1: L1 Temperature - read
Flexible read-link 08 r	FLOAT	Power Controller #1: L2 Urms - read
Flexible read-link 09 r	FLOAT	Power Controller #1: L2 Irms - read
Flexible read-link 10 r	FLOAT	Power Controller #1: L2 Power - read
Flexible read-link 11 r	FLOAT	Power Controller #1: L2 Resistance - read
Flexible read-link 12 r	FLOAT	Power Controller #1: L2 Umains - read
Flexible read-link 13 r	FLOAT	Power Controller #1: L2 Temperature - read
Flexible read-link 14 r	FLOAT	Power Controller #1: L3 Urms - read
Flexible read-link 15 r	FLOAT	Power Controller #1: L3 Irms - read

Table 7. Default flexible links (Continued)

Flexible Link	Type	Default Link Setting
Flexible read-link 16 r	FLOAT	Power Controller #1: L3 Power - read
Flexible read-link 17 r	FLOAT	Power Controller #1: L3 Resistance - read
Flexible read-link 18 r	FLOAT	Power Controller #1: L3 Umains - read
Flexible read-link 19 r	FLOAT	Power Controller #1: L3 Temperature - read
Flexible read-link 20 r	UINT32 FLOAT	Not applicable

INSTALLING OPTIONAL MODULES

DANGER:

RISK OF DEATH OR BODILY INJURY. Disconnect and lockout/tagout all sources of input power before working on this unit or anything connected to it.

DANGER:

RISQUE DE MORT OU DE BLESSURES CORPORELLES. Débrancher et verrouiller/étiqueter toutes les sources de puissance d'entrée avant de travailler sur cette unité ou sur tout élément qui y est raccordé.

The optional modules may be shipped separately.

1. Verify that the unit is disconnected from all power sources.
2. Unpack each optional module at an ESD safe work space.
3. Plug each optional module into the unit.

When an Anybus module is inserted into the unit, guide the module towards the left during insertion.

4. Secure each module with the two TORX® T8 screws provided with the module.

If an Anybus module must be removed from the unit, loosen the TORX T8 mounting screws 3 turns, and pry out the module with a small flat-bladed screwdriver, as shown in the following figure.

Figure 6. Anybus module removal

FAST PROCESS DATA COMMUNICATION

For fast communication, some process data are buffered in the communication module. To read or write a buffered parameter, use the address in the following tables, rather than the ADI associated address in table “[Modbus RTU Parameter List](#)” on page 13.

Important

The parameter assigned to each address changes depending on how the Thyro-PX power controller is configured.

Buffered Read Addresses

The parameter assigned to each address changes with each of the following configurations:

- Single-phase (1 * 1 phase)
- 2x single-phase (2 * 1 phase)
- 3x single-phase (3 * 1 phase)
- Three-phase economic circuit (two phase) (1 * 2 phase)
- Three-phase (1 * 3 phase)

Use the column in the following table which corresponds with your hardware configuration. For the default flexible links, see “[Default Flexible Links](#)” on page 7.

Table 8. Buffered read addresses

Address		Read Parameter by Thyro-PX Configuration				
Dec	Hex	1 * 1 phase	2 * 1 phase	3 * 1 phase	1 * 2 phase	1 * 3 phase
256	100	Device Error device r	Device Error device r	Device Error device r	Device Error device r	Device Error device r

309	135		Flexible link 16 r	Flexible link 11 r		

Table 8. Buffered read addresses (Continued)

Address		Read Parameter by Thyro-PX Configuration				
Dec	Hex	1 * 1 phase	2 * 1 phase	3 * 1 phase	1 * 2 phase	1 * 3 phase
310	136		Flexible link 17 r	Flexible link 12 r		
311	137		Flexible link 18 r	Flexible link 13 r		
312	138		Flexible link 19 r	Flexible link 14 r		
313	139		Flexible link 20 r	Flexible link 15 r		
314	13A			Flexible link 16 r		
315	13B			Flexible link 17 r		
316	13C			Flexible link 18 r		
317	13D			Flexible link 19 r		
318	13E			Flexible link 20 r		

¹ See “Default Flexible Links” on page 7

Buffered Write Addresses

The parameter assigned to each address changes with each of the following configurations:

- Single-phase (1 * 1 phase)
- 2x single-phase (2 * 1 phase)
- 3x single-phase (3 * 1 phase)
- Three-phase economic circuit (two phase) (1 * 2 phase)
- Three-phase (1 * 3 phase)

Use the column in the following table which corresponds with your hardware configuration. For the default flexible links, see “Default Flexible Links” on page 7.

Table 9. Buffered write addresses

Address		Write Parameter by Thyro-PX Configuration				
Dec	Hex	1 * 1 phase	2 * 1 phase	3 * 1 phase	1 * 2 phase	1 * 3 phase
0	0	Device Commands w	Device Commands w	Device Commands w	Device Commands w	Device Commands w

216	Write	958	3BE	#1 PID Kp w	FLOAT	Power controller #1: PID Kp - write
217	Write	960	3C0	#1 PID Ki w	FLOAT	Power controller #1: PID Ki - write
218	Write	962	3C2	#1 PID Kd w	FLOAT	Power controller #1: PID Kd - write
219		964	3C4			
220		966	3C6			
221		968	3C8			

Table 10. Parameter list (Continued)

ADI #	Read / Write	Address		Parameter Name	Type	Parameter Description
		Dec	Hex			
222	Write	970	3CA	#2 Starting mode w	UINT8	Power controller #2: Starting mode - write 0: None 1: Ramp 2: MOSI 3: MOSI and ramp
223	Write	972	3CC	#2 Operating mode w	UINT8	Power controller #2: Operating mode - write 0: TAKT (full wave) 1: VAR (phase angle)
224	Write	974	3CE	#2 Control mode w	UINT8	Power controller #2: Control mode - write 0: None 1: U 2: U ² 3: I 4: I ² 5: P
225	Write	976	3D0	#2 PID Kp w	FLOAT	Power controller #2: PID Kp - write
226	Write	978	3D2	#2 PID Ki w	FLOAT	Power controller #2: PID Ki - write
227	Write	980	3D4	#2 PID Kd w	FLOAT	Power controller #2: PID Kd - write
228		982	3D6			
229		984	3D8			
230		986	3DA			
231	Write	988	3DC	#3 Starting mode w	UINT8	Power controller #3: Starting mode - write 0: None 1: Ramp 2: MOSI 3: MOSI and ramp
232	Write	990	3DE	#3 Operating mode w	UINT8	Power controller #3: Operating mode - write 0: TAKT (full wave) 1: VAR (phase angle)

Table 10. Parameter list (Continued)

ADI #	Read / Write	Address		Parameter Name	Type	Parameter Description
		Dec	Hex			
233	Write	992	3E0	#3 Control mode w	UINT8	Power controller #3: Control mode - write 0: None 1: U 2: U ² 3: I 4: I ² 5: P
234	Write	994	3E2	#3 PID Kp w	FLOAT	Power controller #3: PID Kp - write
235	Write	996	3E4	#3 PID Ki w	FLOAT	Power controller #3: PID Ki - write
236	Write	998	3E6	#3 PID Kd w	FLOAT	Power controller #3: PID Kd - write

AE GLOBAL SERVICES

Please contact AE Global Services if you have questions or problems that cannot be resolved by working through the provided troubleshooting. When you call Global Services, make sure to have the unit serial number and part number. These numbers are available on unit labels.

 **Important**

For returns and repairs, please call AE Global Services to get the correct shipping address.

Table 11. AE Global Services 24 X 7 contact information

Office	Contact
AE World Headquarters	<p>Address:</p> <p>1625 Sharp Point Drive Fort Collins, CO 80525 USA</p> <p>Phone (24 hrs/day, 7 days/week):</p> <p>800.446.9167 or +1.970.221.0108</p> <p>Email: (We will respond to email by the next business day.)</p> <p>mailto:technical.support@aei.com</p>
Thermal product support	<p>Contact by phone or email:</p> <p>+1.360.694.7871</p> <p>mailto:thermalapplications@aei.com</p>
Power Control Module product support	<p>Contact by phone or email:</p> <p>+49 (0) 2902 910370 10 (technical support during German business hours)</p> <p>mailto:powercontroller@aei.com</p>
High Voltage product support: HiTek Power, Ltd.	<p>Contact by phone or email:</p> <p>+44 (0) 1903 712400</p> <p>mailto:support.centre@aei.com</p>
High Voltage product support: UltraVolt, Inc.	<p>Contact by phone or email:</p> <p>+1.631.471.4444</p> <p>mailto:sales.support-uv@aei.com</p>
