

# Thyro-PX™ Anybus® Modbus TCP

## Guide

57010166-00A

January 2017

### Related Documentation

For complete information on the Thyro-PX unit, see the user manual that accompanied the system. In particular, reference the safety information in Chapter 1 of the user manual for the Thyro-PX unit.

## ANYBUS MODBUS TCP MODULE

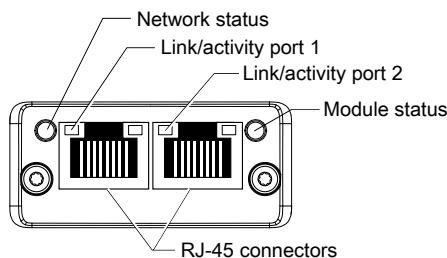

The Anybus Modbus TCP module is an optional accessory for the Thyro-PX power controller.

# HARDWARE DESCRIPTION

This module is compliant with the Modbus® TCP standard.

**Figure 1.** Hardware

**Table 1.** Network status LED

LED State	Description
Off	No IP address or exception state
Green	At least one Modbus message received
Green, blinking	Waiting for first Modbus message
Red	IP address conflict detected, fatal error
Red, blinking	Connection timeout. No Modbus message has been received within the configured “process active timeout” time.

**Table 2.** Module status LED

LED State	Description
Off	No power
Green	Normal operation
Red	Major fault, fatal error
Red, blinking	Minor fault
Alternating red/green	Firmware update in progress

If both the network status LED and the module status LED are red, a fatal error has occurred.

**Table 3.** Link/activity LED

LED State	Description
Off	No link
Green	100 Mbit/s link established

**Table 3.** Link/activity LED (Continued)

LED State	Description
Green, flickering	100 Mbit/s activity
Yellow	10 Mbit/s link established
Yellow, flickering	10 Mbit/s activity

**Table 4.** RJ-45 Ethernet pinout

Pin	Description
1	TD+
2	TX-
3	RX+
6	RX-
4, 5, 7, 8	Normally left unused; to ensure signal integrity, these pins are tied together and terminated to PE via a filter circuit in the module.
Housing	Cable shield

## CONFIGURING WITH THYRO-TOOL PRO PC SOFTWARE

You can configure the Thyro-PX power controller using either the Thyro-Tool Pro PC software or the Thyro-Touch display.

To configure the unit, you will:

- Adapt the Thyro-PX hardware configuration

If required, you can also:

- Select the configuration
- Configure the diagnostics
- Configure the flexible link parameters

## Adapting Thyro-PX Hardware Configuration

Open parameter file with the unit online in the **Port Explorer** tab of the Thyro-Tool Pro PC software, or use the Thyro-Touch display.

Set the Anybus module slot to **Modbus TCP** in the Thyro-PX device hardware configuration:

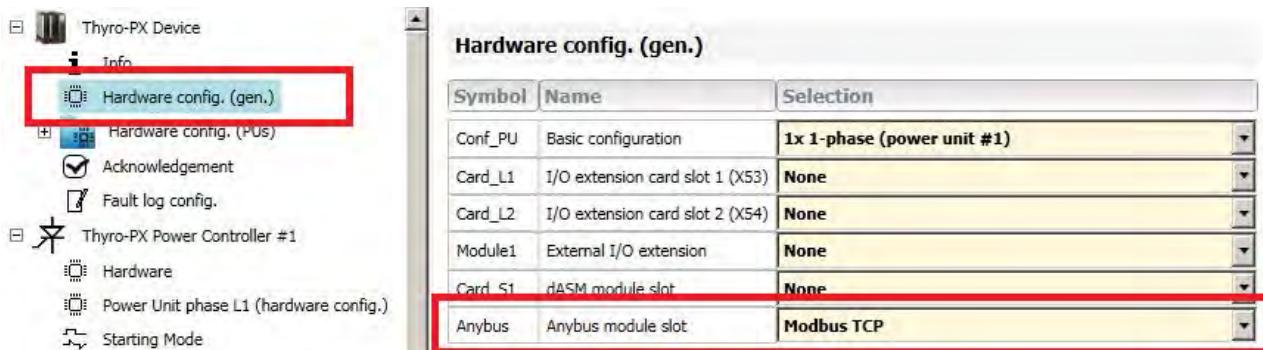

Figure 2. Menu tree

### Anybus Parameter Group

When the computer is connected to the Thyro-PX power controller, the Anybus parameter group will be added to the parameter list after updating the hardware configuration, as shown in the previous figure.

If the unit is not available for online configuration, the software can also be configured offline. Contact AE Global Services to obtain a parameter file appropriate to your hardware configuration.

Figure 3. Anybus parameter group

## Configuring Modbus TCP IP Address

Set the Modbus TCP IP address in the submenu **Modbus\_TCP**. By default, the IP address is automatically assigned through the Dynamic Host Configuration Protocol (DHCP) server.

**Modbus\_TCP**

Symbol	Name	Selection		
DHCP	DHCP	IP address automatically		
Symbol	Name	Value	Minimum	Maximum
IP_Adr	IP_Adr	0.0.0.0		
Submask	Submask	0.0.0.0		
Gateway	Gateway	0.0.0.0		
Timeout	Timeout	2.00 s	0.00 s	60.00 s

*Figure 4.* Configure Modbus TCP IP address**Connecting to the Modbus TCP controller**

Some process control software can scan the network to automatically detect and connect to Modbus TCP devices.

To manually configure the process control software, find the MAC address for the Modbus TCP module in the **General** menu. Use the MAC address to configure the process control software.

**General**

Symbol	Name	Selection		
Config	configured	Modbus TCP		
Insert	existent	Modbus TCP		
Symbol	Name	Value	Minimum	Maximum
ProvId	Provider ID	17	0	255
VerMajor	VerMajor	1	0	255
VerMinor	VerMinor	7	0	255
VerPatch	VerPatch	1	0	255
MAC_Adress	MAC_Adress	00-30-11-11-EC-69		

*Figure 5.* Modbus TCP module MAC address

## Selecting Configuration

Configuration		
Symbol	Name	Status
Valid	Control of validity	Cyclic telegram valid only if bit is set
SetMopo	Motorpotentiometer = Master	Motorpotentiometer = Master

Symbol	Name	Selection
SP_Error	Setpoint Error	Zero
LRConfig	Local remote configuration	Unchanged behaviour

*Figure 6. Select configuration*

Each configuration name, status, and selection is described in the following table:

**Table 5.** Configuration

Name	Status/Selection	Description
<b>Control of validity</b>	<b>Cyclic telegram valid only if bit is set</b>	When enabled, the cyclic telegrams received from the master will only be considered as valid and processed if bit 15 of the Device Command (API # 41) is set. This function allows several settings to be changed one after another before enabling the complete change, thereby avoiding unwanted effects due to an incomplete change.
<b>Motorpotentiometer = Master</b>	<b>Motorpotentiometer = Master</b>	When enabled, the value of the motorpotentiometer continuously follows the master setpoint while in remote operation, so that no setpoint leap occurs during the switch-over to the local setpoint.
<b>Setpoint Error</b>	<b>Zero</b>	Zero is used as the setpoint when the master setpoint is missing.
	<b>Last valid master setpoint</b>	The last valid master setpoint is used as the setpoint when the master setpoint is missing.
	<b>Last valid error setpoint</b>	The last valid error setpoint is used as the setpoint when the master setpoint is missing.
<b>Local remote configuration</b>	<b>Unchanged behavior</b>	Configuration of the master's influence to the local remote behavior.
	<b>Automatic switch to local</b>	The unit will automatically switch to local mode when the communication with master is interrupted.
	<b>Ignore master in local</b>	When the unit is in local mode, data and commands from the master will be ignored.

## Configuring Diagnostics

Modbus TCP diagnostic information is available according to the following tables.

**Table 6.**

Input Register	Dec	Hex	
Diagnostic event count	2048	800	Number of pending diagnostic events. There may be gaps between active diagnostic events. Inactive diagnostic events return 0000h when read.
Diagnostic event #1	2049	801	High byte = severity
Diagnostic event #2	2050	802	Low byte = event code
Diagnostic event #3	2051	803	
Diagnostic event #4	2052	804	
Diagnostic event #5	2053	805	
Diagnostic event #6	2054	806	

The following two diagnostic events are supported:

**Table 7. Diagnostic events**

Event Code	Event
0x10 (= 16)	Error
0x40 (= 64)	Temperature

You can configure both events in the Thyro-Tool Pro PC software. You can add any Thyro-PX error or status message. Once an error or status message is added, the message will trigger the corresponding extended diagnosis event.

## Configuring Flexible Link Parameters

The flexible link parameters have been designed to allow access to Thyro-PX internal data, such as parameters and actual values, that are not listed in the parameter list.

There are 20 flexible link parameters for writing and 20 flexible link parameters for reading data.

The default read links are shown in the Thyro-Tool Pro PC software, and in the table “[Default Flexible Links](#)”.

Once the respective data point has been selected in the flexible link parameter configuration, it can be accessed on the Modbus TCP using the respective flexible link parameter API that is listed in the parameter list (see ).

## Default Flexible Links

**Table 8. Default flexible links**

Flexible Link	Default Link Setting
Flexible read-link 01 r	Power Controller #1: Total power - read
Flexible read-link 02 r	Power Controller #1: L1 Urms - read
Flexible read-link 03 r	Power Controller #1: L1 Irms - read
Flexible read-link 04 r	Power Controller #1: L1 Power - read
Flexible read-link 05 r	Power Controller #1: L1 Resistance - read
Flexible read-link 06 r	Power Controller #1: L1 Umains - read
Flexible read-link 07 r	Power Controller #1: L1 Temperature - read
Flexible read-link 08 r	Power Controller #1: L2 Urms - read
Flexible read-link 09 r	Power Controller #1: L2 Irms - read
Flexible read-link 10 r	Power Controller #1: L2 Power - read
Flexible read-link 11 r	Power Controller #1: L2 Resistance - read
Flexible read-link 12 r	Power Controller #1: L2 Umains - read
Flexible read-link 13 r	Power Controller #1: L2 Temperature - read
Flexible read-link 14 r	Power Controller #1: L3 Urms - read
Flexible read-link 15 r	Power Controller #1: L3 Irms - read
Flexible read-link 16 r	Power Controller #1: L3 Power - read
Flexible read-link 17 r	Power Controller #1: L3 Resistance - read
Flexible read-link 18 r	Power Controller #1: L3 Umains - read
Flexible read-link 19 r	Power Controller #1: L3 Temperature - read
Flexible read-link 20 r	Not applicable

## INSTALLING OPTIONAL MODULES

**DANGER:**

RISK OF DEATH OR BODILY INJURY. Disconnect and lockout/tagout all sources of input power before working on this unit or anything connected to it.

**DANGER:**

RISQUE DE MORT OU DE BLESSURES CORPORELLES. Débrancher et verrouiller/étiqueter toutes les sources de puissance d'entrée avant de travailler sur cette unité ou sur tout élément qui y est raccordé.

The optional modules may be shipped separately.

1. Verify that the unit is disconnected from all power sources.

2. Unpack each optional module at an ESD safe work space.
3. Plug each optional module into the unit.

When an Anybus module is inserted into the unit, guide the module towards the left during insertion.

4. Secure each module with the two TORX® T8 screws provided with the module.

If an Anybus module must be removed from the unit, loosen the TORX T8 mounting screws 3 turns, and pry out the module with a small flat-bladed screwdriver, as shown in the following figure.

*Figure 7. Anybus module removal*

## FAST PROCESS DATA COMMUNICATION

For fast communication, some process data are buffered in the communication module. To read or write a buffered parameter, use the address in the following tables, rather than the API associated address in table “[Modbus TCP Parameter List](#)” on page 13.

 **Important**

The parameter assigned to each address changes depending on how the Thyro-PX power controller is configured.

### Buffered Read Addresses

The parameter assigned to each address changes with each of the following configurations:

- Single-phase (1 \* 1 phase)
- 2x single-phase (2 \* 1 phase)
- 3x single-phase (3 \* 1 phase)
- Three-phase economic circuit (two phase) (1 \* 2 phase)

- Three-phase (1 \* 3 phase)

Use the column in the following table which corresponds with your hardware configuration. For the default flexible links, see “[Default Flexible Links](#)” on page 7.

**Table 9. Buffered read addresses**

Address		Read Parameter by Thyro-PX Configuration				
Dec	Hex	1 * 1 phase	2 * 1 phase	3 * 1 phase	1 * 2 phase	1 * 3 phase
2048	800	Device Error device r	Device Error device r	Device Error device r	Device Error device r	Device Error device r

2116	844			Flexible link 18 r		
2118	846			Flexible link 19 r		
2120	848			Flexible link 20 r		

<sup>1</sup> See “Default Flexible Links” on page 7

## Buffered Write Addresses

The parameter assigned to each address changes with each of the following configurations:

- Single-phase (1 \* 1 phase)
- 2x single-phase (2 \* 1 phase)
- 3x single-phase (3 \* 1 phase)
- Three-phase economic circuit (two phase) (1 \* 2 phase)
- Three-phase (1 \* 3 phase)

Use the column in the following table which corresponds with your hardware configuration. For the default flexible links, see “Default Flexible Links” on page 7.

**Table 10.** Buffered write addresses

Address		Write Parameter by Thyro-PX Configuration				
Dec	Hex	1 * 1 phase	2 * 1 phase	3 * 1 phase	1 * 2 phase	1 * 3 phase
0	0	Device Commands w	Device Commands w	Device Commands w	Device Commands w	Device Commands w

180	Write	4470	1176	I/O Ext1 Analog Out 1 w	FLOAT	I/O Extension 1: Analog output 1 - write
181	Write	4472	1178	I/O Ext1 Analog Out 2 w	FLOAT	I/O Extension 1: Analog output 2 - write
182	Write	4474	117A	I/O Ext1 Analog Out 3 w	FLOAT	I/O Extension 1: Analog output 3 - write
183		4476	117C			
184		4478	117E			
185	Read	4480	1180	I/O Ext1 Digital In r	UINT16	I/O Extension 1: Digital input - read Bit 0: Digital input 1 Bit 1: Digital input 2
186		4482	1182			

**Table 11. Parameter list (Continued)**

API #	Read / Write	Address		Parameter Name	Type	Parameter Description
		Dec	Hex			
187	Write	4484	1184	I/O Ext1 Digital Out w	UINT16	I/O Extension 1: Digital output - write Bit 0: Digital output 1 Bit 1: Digital output 2
188	Read	4486	1186	I/O Ext1 Digital Out r	UINT16	I/O Extension 1: Digital output - read Bit 0: Digital output 1 Bit 1: Digital output 2
189		4488	1188			
190		4490	118A			
191		4492	118C			
192		4494	118E			
193	Write	4496	1190	I/O Ext2 Relay w	UINT16	I/O Extension 2: Relay - write Bit 0: Relay 1 Bit 1: Relay 2
194	Read	4498	1192	I/O Ext2 Relay r	UINT16	I/O Extension 2: Relay - read Bit 0: Relay 1 Bit 1: Relay 2
195		4500	1194			
196	Read	4502	1196	I/O Ext2 Analog In 1 r	FLOAT	I/O Extension 2: Analog input 1 - read
197	Read	4504	1198	I/O Ext2 Analog In 2 r	FLOAT	I/O Extension 2: Analog input 2 - read
198	Read	4506	119A	I/O Ext2 Analog In 3 r	FLOAT	I/O Extension 2: Analog input 3 - read
199		4508	119C			
200	Write	4510	119E	I/O Ext2 Analog Out 1 w	FLOAT	I/O Extension 2: Analog output 1 - write
201	Write	4512	11A0	I/O Ext2 Analog Out 2 w	FLOAT	I/O Extension 2: Analog output 2 - write
202	Write	4514	11A2	I/O Ext2 Analog Out 3 w	FLOAT	I/O Extension 2: Analog output 3 - write
203		4516	11A4			
204		4518	11A6			
205	Read	4520	11A8	I/O Ext2 Digital In r	UINT16	I/O Extension 2: Digital input - read Bit 0: Digital input 1 Bit 1: Digital input 2
206		4522	11AA			

**Table 11. Parameter list (Continued)**

API #	Read / Write	Address		Parameter Name	Type	Parameter Description
		Dec	Hex			
207	Write	4524	11AC	I/O Ext2 Digital Out w	UINT16	I/O Extension 2: Digital output - write Bit 0: Digital output 1 Bit 1: Digital output 2
208	Read	4526	11AE	I/O Ext2 Digital Out r	UINT16	I/O Extension 2: Digital output - read Bit 0: Digital output 1 Bit 1: Digital output 2
209		4528	11B0			
210	Read	4530	11B2	dASM Total power r	FLOAT	dASM Total power - read
211	Read	4532	11B4	dASM Count r	UINT8	dASM Count - read
212		4534	11B6			
213	Write	4536	11B8	#1 Starting mode w	UINT8	Power controller #1: Starting mode - write 0: None 1: Ramp 2: MOSI 3: MOSI and ramp
214	Write	4538	11BA	#1 Operating mode w	UINT8	Power controller #1: Operating mode - write 0: TAKT (full wave) 1: VAR (phase angle)
215	Write	4540	11BC	#1 Control mode w	UINT8	Power controller #1: Control mode - write 0: None 1: U 2: U <sup>2</sup> 3: I 4: I <sup>2</sup> 5: P
216	Write	4542	11BE	#1 PID Kp w	FLOAT	Power controller #1: PID Kp - write
217	Write	4544	11C0	#1 PID Ki w	FLOAT	Power controller #1: PID Ki - write
218	Write	4546	11C2	#1 PID Kd w	FLOAT	Power controller #1: PID Kd - write
219		4548	11C4			
220		4550	11C6			
221		4552	11C8			

**Table 11. Parameter list (Continued)**

API #	Read / Write	Address		Parameter Name	Type	Parameter Description
		Dec	Hex			
222	Write	4554	11CA	#2 Starting mode w	UINT8	Power controller #2: Starting mode - write 0: None 1: Ramp 2: MOSI 3: MOSI and ramp
223	Write	4556	11CC	#2 Operating mode w	UINT8	Power controller #2: Operating mode - write 0: TAKT (full wave) 1: VAR (phase angle)
224	Write	4558	11CE	#2 Control mode w	UINT8	Power controller #2: Control mode - write 0: None 1: U 2: U <sup>2</sup> 3: I 4: I <sup>2</sup> 5: P
225	Write	4560	11D0	#2 PID Kp w	FLOAT	Power controller #2: PID Kp - write
226	Write	4562	11D2	#2 PID Ki w	FLOAT	Power controller #2: PID Ki - write
227	Write	4564	11D4	#2 PID Kd w	FLOAT	Power controller #2: PID Kd - write
228		4566	11D6			
229		4568	11D8			
230		4570	11DA			
231	Write	4572	11DC	#3 Starting mode w	UINT8	Power controller #3: Starting mode - write 0: None 1: Ramp 2: MOSI 3: MOSI and ramp
232	Write	4574	11DE	#3 Operating mode w	UINT8	Power controller #3: Operating mode - write 0: TAKT (full wave) 1: VAR (phase angle)

**Table 11. Parameter list (Continued)**

API #	Read / Write	Address		Parameter Name	Type	Parameter Description
		Dec	Hex			
233	Write	4576	11E0	#3 Control mode w	UINT8	Power controller #3: Control mode - write 0: None 1: U 2: U <sup>2</sup> 3: I 4: I <sup>2</sup> 5: P
234	Write	4578	11E2	#3 PID Kp w	FLOAT	Power controller #3: PID Kp - write
235	Write	4580	11E4	#3 PID Ki w	FLOAT	Power controller #3: PID Ki - write
236	Write	4582	11E6	#3 PID Kd w	FLOAT	Power controller #3: PID Kd - write

## AE GLOBAL SERVICES

Please contact AE Global Services if you have questions or problems that cannot be resolved by working through the provided troubleshooting. When you call Global Services, make sure to have the unit serial number and part number. These numbers are available on unit labels.

 **Important**

For returns and repairs, please call AE Global Services to get the correct shipping address.

**Table 12. AE Global Services 24 X 7 contact information**

Office	Contact
AE World Headquarters	<p>Address:</p> <p>1625 Sharp Point Drive Fort Collins, CO 80525 USA</p> <p>Phone (24 hrs/day, 7 days/week):</p> <p>800.446.9167 or +1.970.221.0108</p> <p>Email: (We will respond to email by the next business day.)</p> <p><a href="mailto:technical.support@aei.com">mailto:technical.support@aei.com</a></p>
Sekidenko thermal product support	<p>Contact by phone or email:</p> <p>+1.360.694.7871</p> <p><a href="mailto:thermalapplications@aei.com">mailto:thermalapplications@aei.com</a></p>
Power Control Module product support	<p>Contact by phone or email:</p> <p>+49 (0)2902 763 520 (technical support during German business hours)</p> <p><a href="mailto:powercontroller@aei.com">mailto:powercontroller@aei.com</a></p>
High Voltage product support: HiTek Power, Ltd.	<p>Contact by phone or email:</p> <p>+44 (0) 1903 712400</p> <p><a href="mailto:support.centre@aei.com">mailto:support.centre@aei.com</a></p>
High Voltage product support: UltraVolt, Inc.	<p>Contact by phone or email:</p> <p>+1.631.471.4444</p> <p><a href="mailto:sales.support-uv@aei.com">mailto:sales.support-uv@aei.com</a></p>
